

6'x 6' Maple Full Privacy Panel

Installation Tips

Planning

- Prior to construction, check with your local regulatory agency for special code requirements in your area
- Contact your utility supplier to locate and mark underground lines.
- Sketch out the layout of your fence and calculate the number of panels, gates, posts and caps needed for your project. Adjust layout to accommodate as many full panels as possible. If you must use a partial panel, place in the furthest corner of the property.
- Careful planning and measuring of your fence project is essential, as moving posts after the concrete sets is extremely difficult.

Digging Post Holes

- Dig post holes 10" to 12" in diameter and 48" deep (depending on local ordinance or expected frost depth in winter).
- Space post holes 72" on-center. (Inside post to post dimension is 67".) Use a string line to ensure all post holes are in line and verify spacing between holes. **Double-check all measurements!**

Setting and Installing Posts and Panels

- Start in the corner. Measure to be sure you can install the finished panel to the post with approximately a 2" gap from the ground to the bottom of the panel.
- Insert a post into the hole. Level and adjust height as needed using gravel. **DO NOT** place posts permanently at this point. Use bracing and shims as needed. Slide the reinforced bottom rail into the pre-cut post, locking into place with the notched tabs. Place the next post in the ground, and slide the notched rail into the post.
- Place one end of the top rail into the post, allowing one end to be free. Install pickets by sliding them into the bottom rail. After all the pickets are placed in the top rail, lock the remaining end of the top rail into the post.
- Make sure posts and bottom rail are level and 2" off of the ground. Fill holes with concrete. Mix thoroughly and follow the directions on the bag. Check to make sure posts and rails are still level. Complete this after every section is completed. Let concrete properly cure according to the manufacturer's recommendation before continuing your installation.
- Repeat process for all remaining panels. Refer to the gate installation instructions when installing gates.
- Install a post cap on each post using PVC cement or an exterior adhesive.
